

AI PARTNER ONBOARDING

Learning Plan & Curriculum

Six chapters for onboarding participants to their AI Partner —
learning objectives and comprehension checks for each.

FACILITATOR EDITION

CHAPTER 1

Why We're Here: Translation Isn't the Same as Understanding

LEARNING OBJECTIVES

- Explain why translated words alone don't guarantee understanding
- Recall a personal example where translation succeeded but meaning didn't
- Describe, at a high level, what the AI Partner is for

COMPREHENSION CHECK

1. What's the difference between translating a sentence and understanding what someone meant?
2. True or false: a perfect translation means you've understood the instruction
3. Share a time a correct translation still left you confused — what was missing?

ME: Your Private AI Partner

LEARNING OBJECTIVES

- Explain how private check-ins work ("Quick check — where are you at?")
- Practice giving an honest response, including disagreement
- Confirm the AI accepts a correction and drops a resolved concern

COMPREHENSION CHECK

1. Name three different honest answers to a check-in
2. What should happen after you say "no, I've got this"?
3. Is disagreeing with the task the same as being confused by it?

US: Bridging Meaning Between Peers

LEARNING OBJECTIVES

- Recognize when a translated message still leaves meaning unclear
- Practice asking your AI Partner "what did they mean by that?"
- Understand that AI interpretations are hedged, not certain facts

COMPREHENSION CHECK

1. What's your next step when a translated message feels off?
2. Should you treat the AI's read on someone's meaning as confirmed?
3. Who has the final say on what a person meant — the AI or them?

THE ROOM: The Facilitator's View

LEARNING OBJECTIVES

- Describe what the facilitator sees: patterns and signals, not raw chats
- Explain that private ME/US conversations aren't shared by default
- State that the facilitator — not the AI — makes the final call

COMPREHENSION CHECK

1. What does the facilitator receive about you by default?
2. If the AI spots a pattern, who decides what happens next?
3. True or false: the AI can override the facilitator's decision

Privacy and Trust: What Stays Private

LEARNING OBJECTIVES

- State the boundary between public/shared and private AI space
- Explain that raw private content needs your explicit permission
- Understand that a refusal is final — not worked around

COMPREHENSION CHECK

1. Name the two spaces described in this chapter
2. What has to happen before the facilitator sees a private chat?
3. What happens if you refuse a permission request?

Putting It Into Practice: Session Norms

LEARNING OBJECTIVES

- List the practical norms: language choice, honesty, disputing translations
- Know how to escalate directly to the facilitator when needed
- Restate what ME, US, and THE ROOM are each responsible for

COMPREHENSION CHECK

1. What should you do if a translation feels wrong?
2. What should you do if the AI Partner doesn't resolve something?
3. In one sentence each — what are ME, US, and THE ROOM?
